БИШКЕК

Sources of data on the population health and health care in the Kyrgyz Republic

- Publications, reference books, NSC website (<http://nsk.kg/>)
- Data of health statistics reports, reference-books, website of E-Health Center (<https://cez.med.kg/>);
- Electronic medical cards/databases/registers;
- Data from state statistics agencies (population census/data from current demographic records);
- Data of surveys (large-scale household surveys (MICS)/sample-based);
- Data of studies on risk factors for incidence of non-communicable diseases, including diabetes (STEPS study)
- Research papers, articles in medical journals etc.

Key indicators on the population health and healthcare

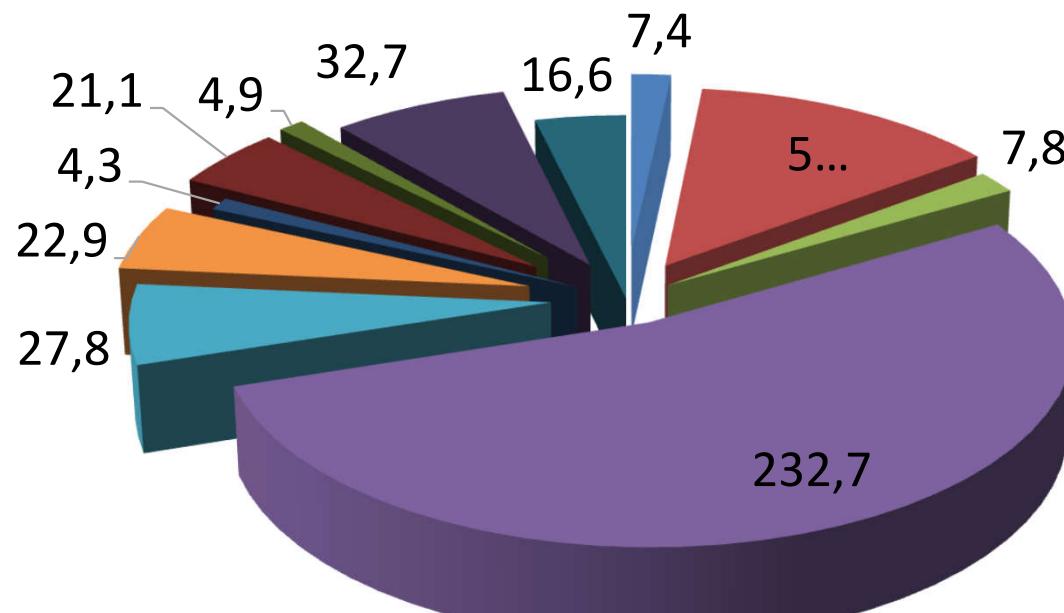

- **Demographics**
- **Key health indicators**
- **Indicators of availability and quality of health services, including healthcare resources**
- **HO performance indicators**

Birth and death rates, KR (per 1,000 population)

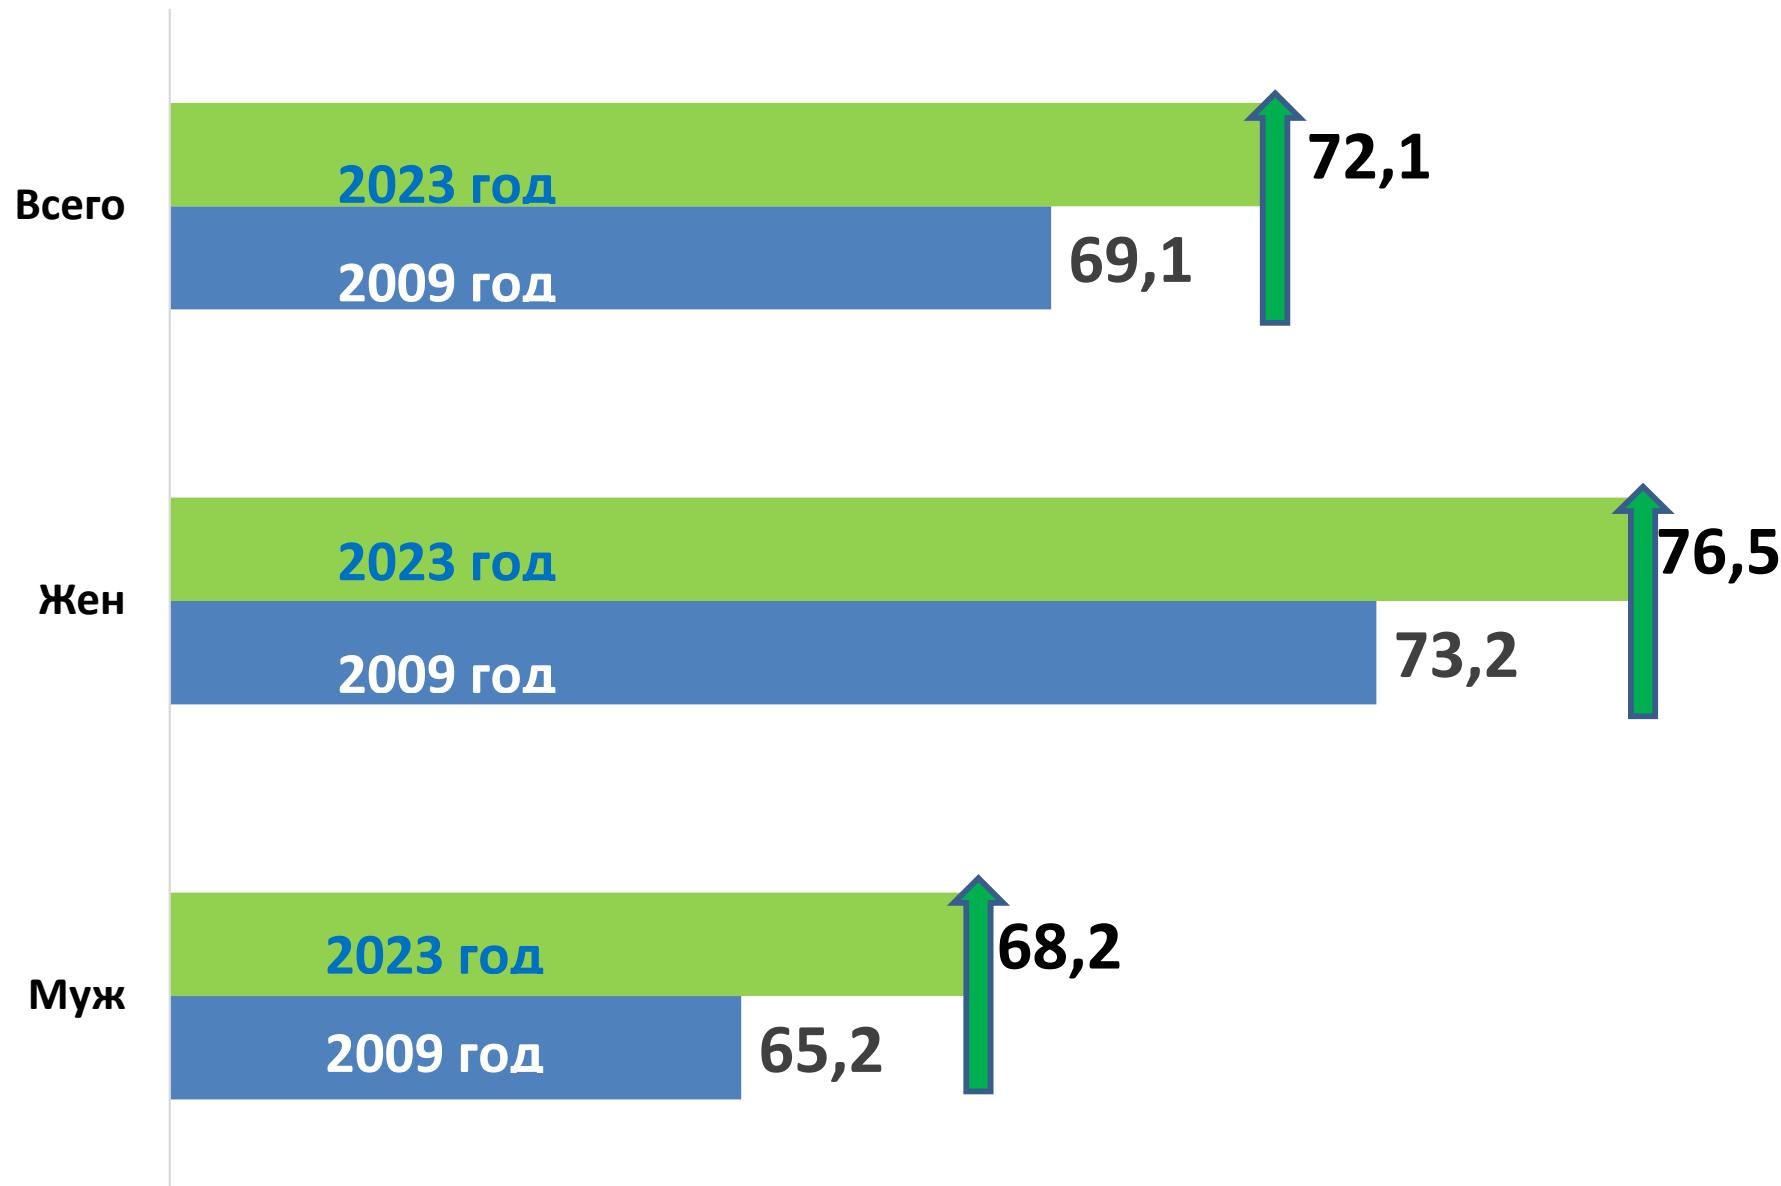

Structure of mortality causes, KR, 2023г. per 100000 population

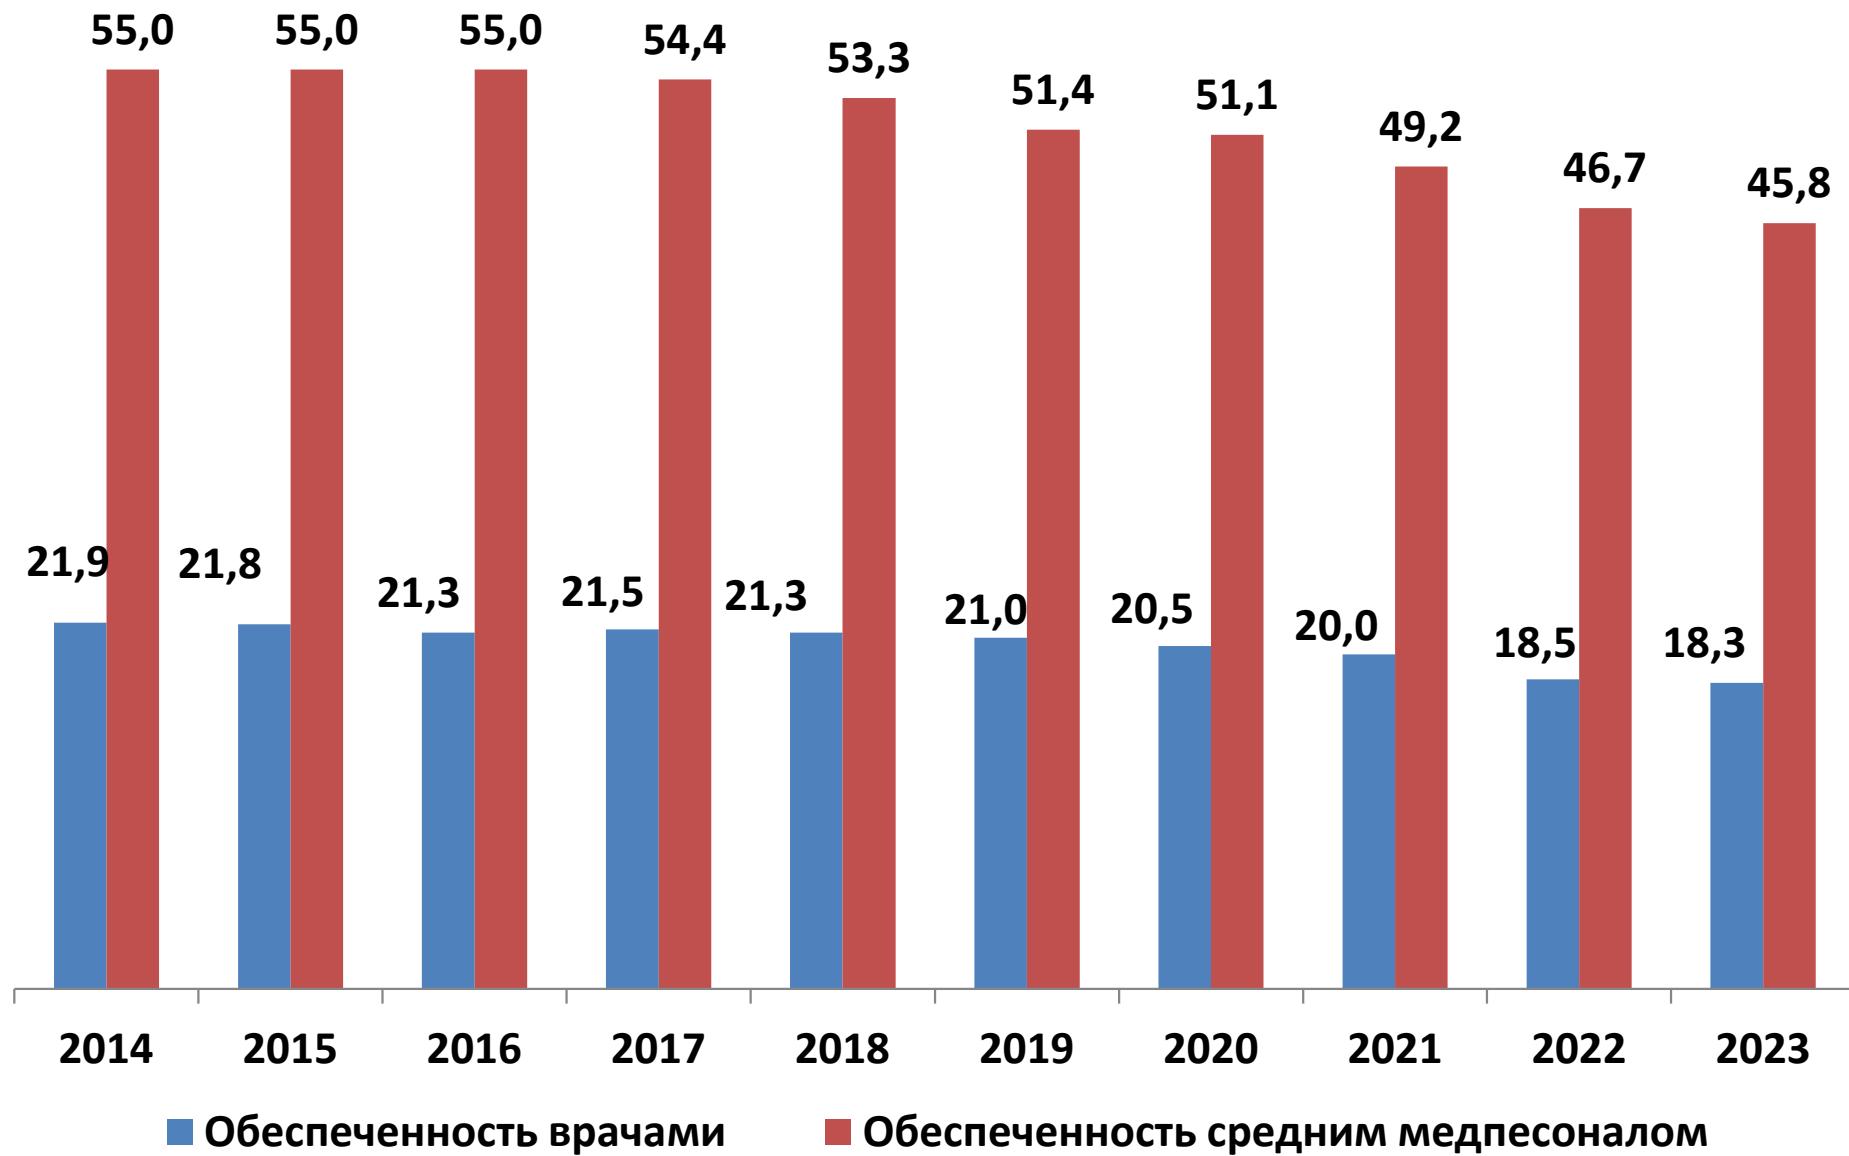

- Инфекционные и паразитарные болезни
- Новообразования
- Болезни нервной системы
- Болезни системы кровообращения
- Болезни органов дыхания
- Болезни органов пищеварения
- Болезни мочеполовой системы
- Состояния, возникающие в перинатальном периоде
- Врожденные аномалии
- Внешние причины смерти
- Прочие

Life expectancy, 2014-2023 (years)

Availability of health human resources, KR (per 10000 population)

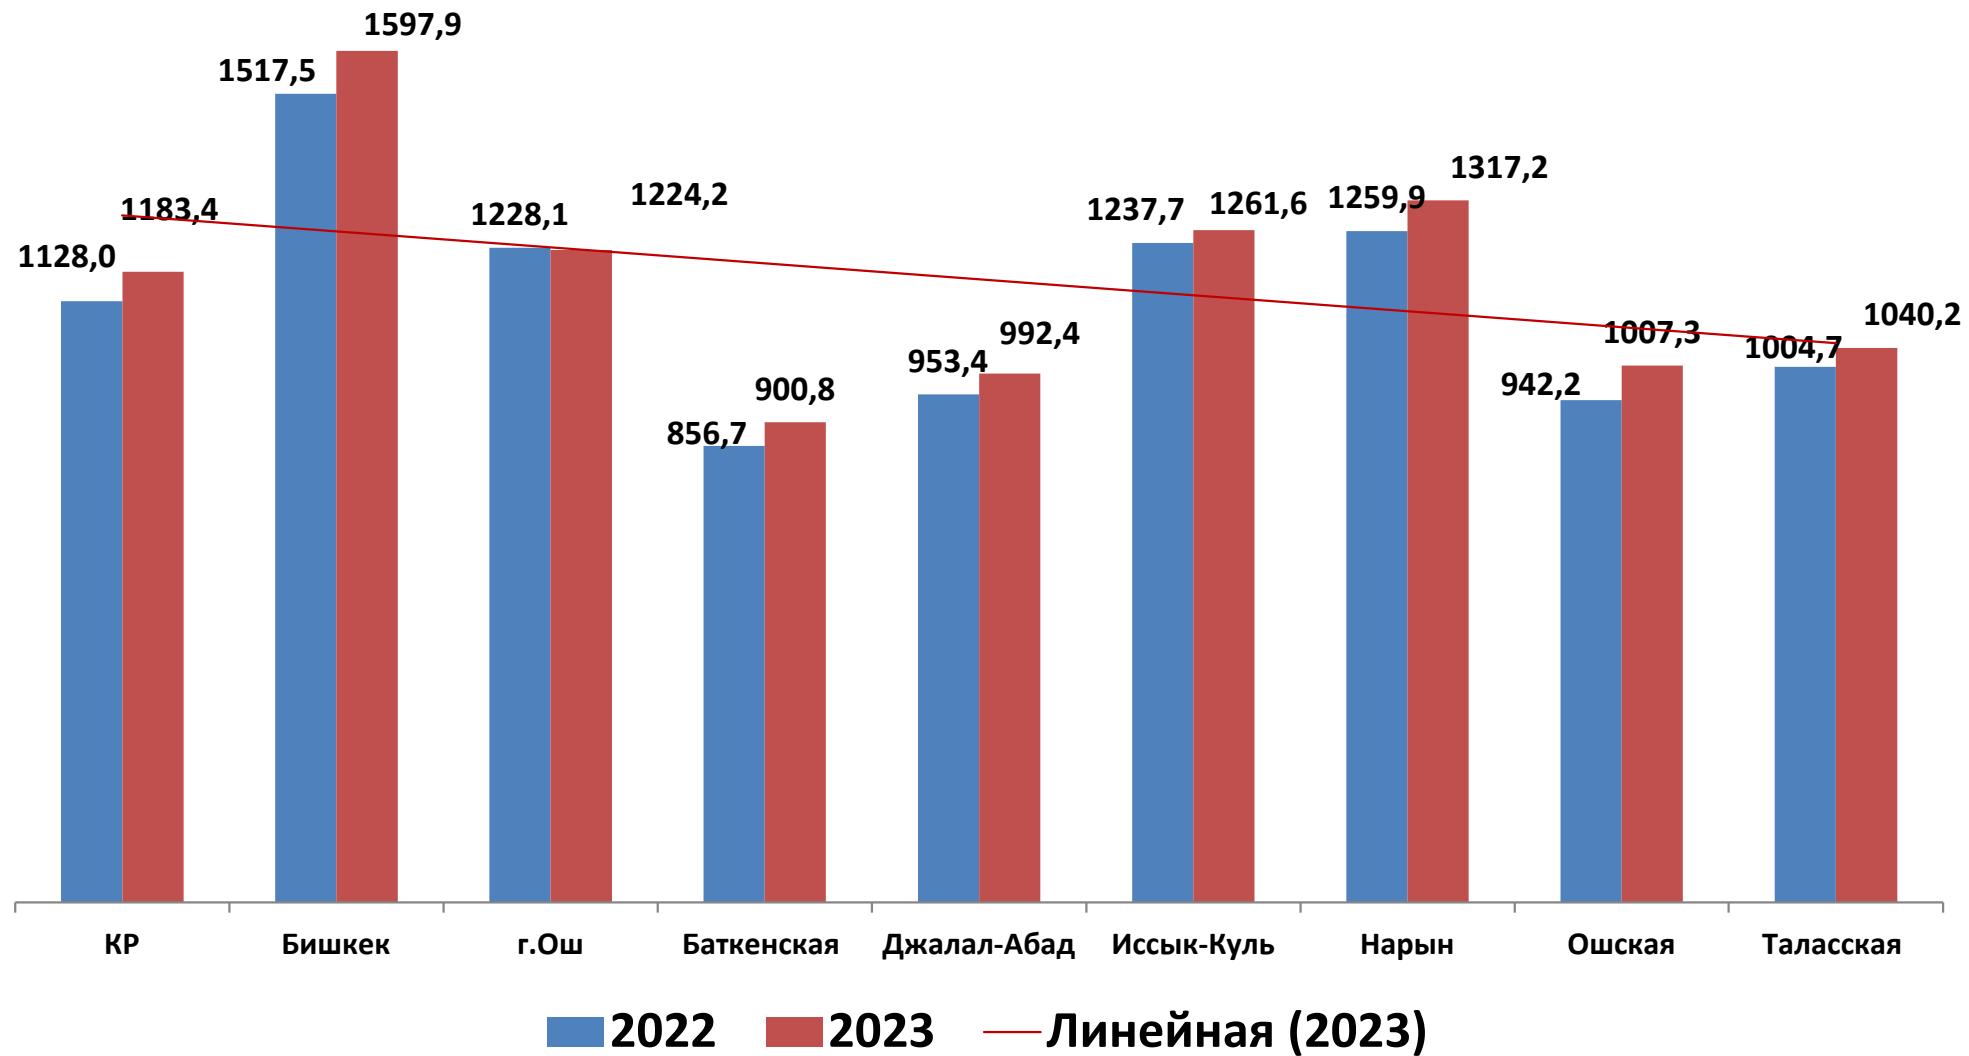

Diabetes Statistics Collection System

- E-Health Center of the KR MoH collects diabetes-related information using official and departmental statistical reporting forms.
- The KR NSC Resolution approves the forms of official statistical reporting (annually):
 - Form # 12 “Report on incidence and preventive work”;
 - Form # 14 “Report on performance of hospitals”
- The KR MoH' Order approves the forms of departmental statistical reporting:
 - Form # 2 zdrav “Report on the prevalence of endocrine pathology”;
 - Form # 12 zdrav “Report on the performance of HOs delivering APS”
 - Form # 3 zdrav “Report on movement of antidiabetic medicines” (quarterly, annually)

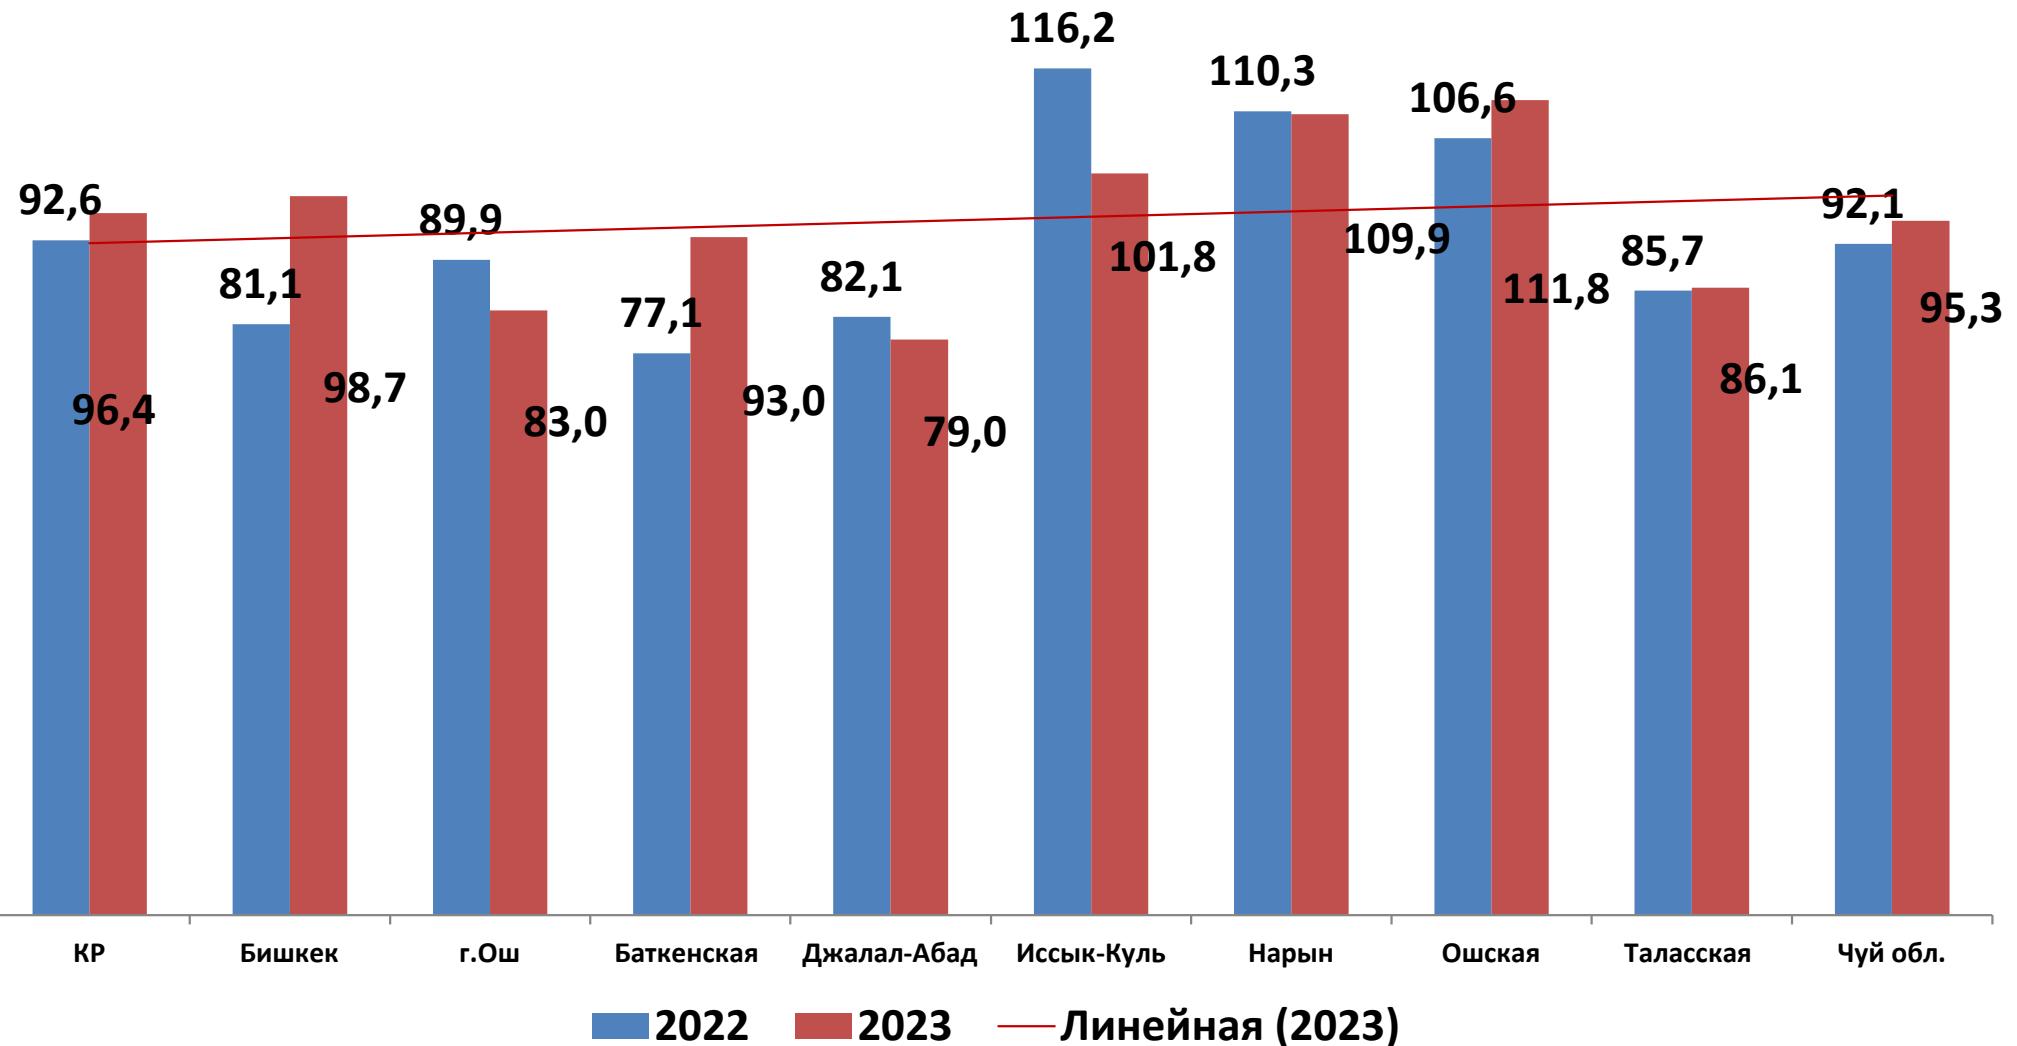

Key figures on diabetes

- **Statistics by group (age, gender)**
- **Prevalence of diabetes**
- **Mortality**
- **Complications**
- **Disability**
- **Hospitalization rate**
- **Indicators of the quality of health services for patients with diabetes: testing for cholesterol, measuring blood pressure, glycohemoglobin, information about people receiving glucose-lowering medicines, etc.**

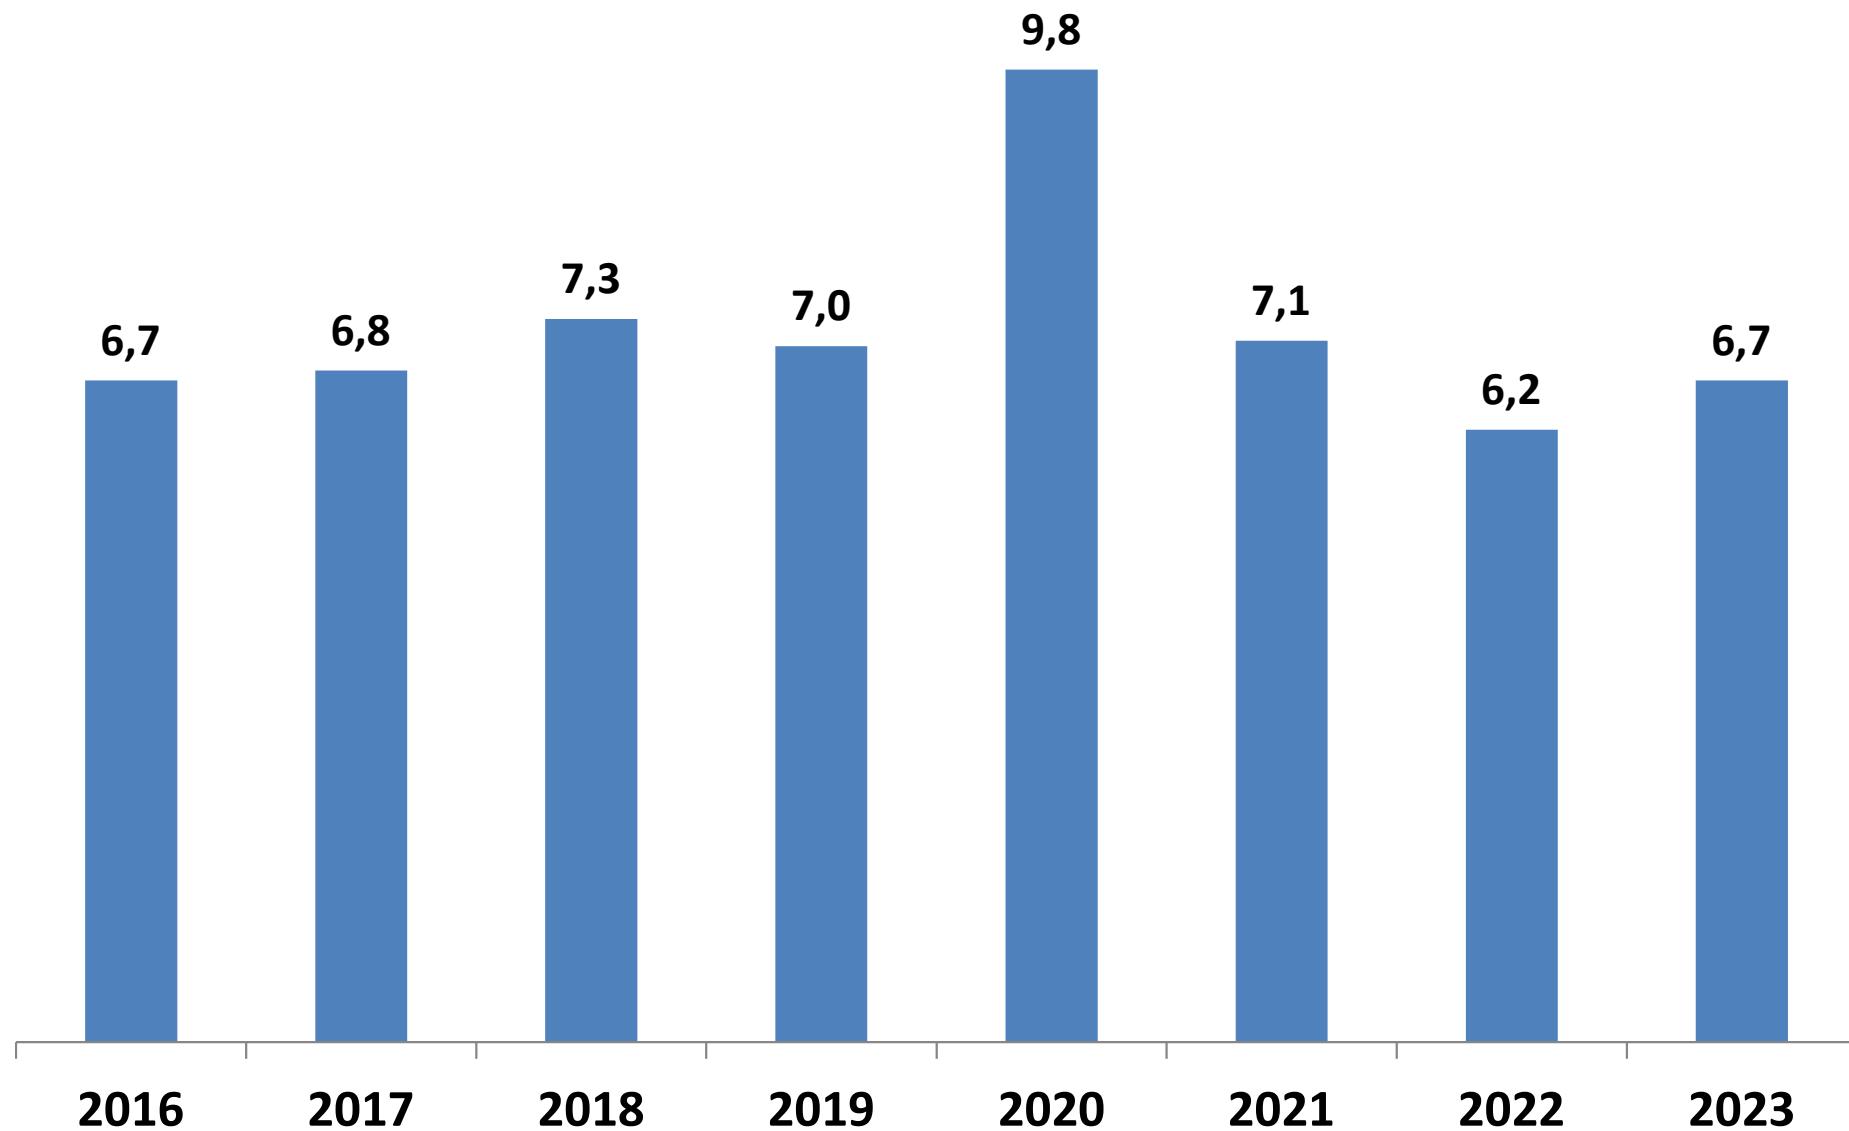

Total number of patients with diabetes, 2022 -2023. (per 100000 population)

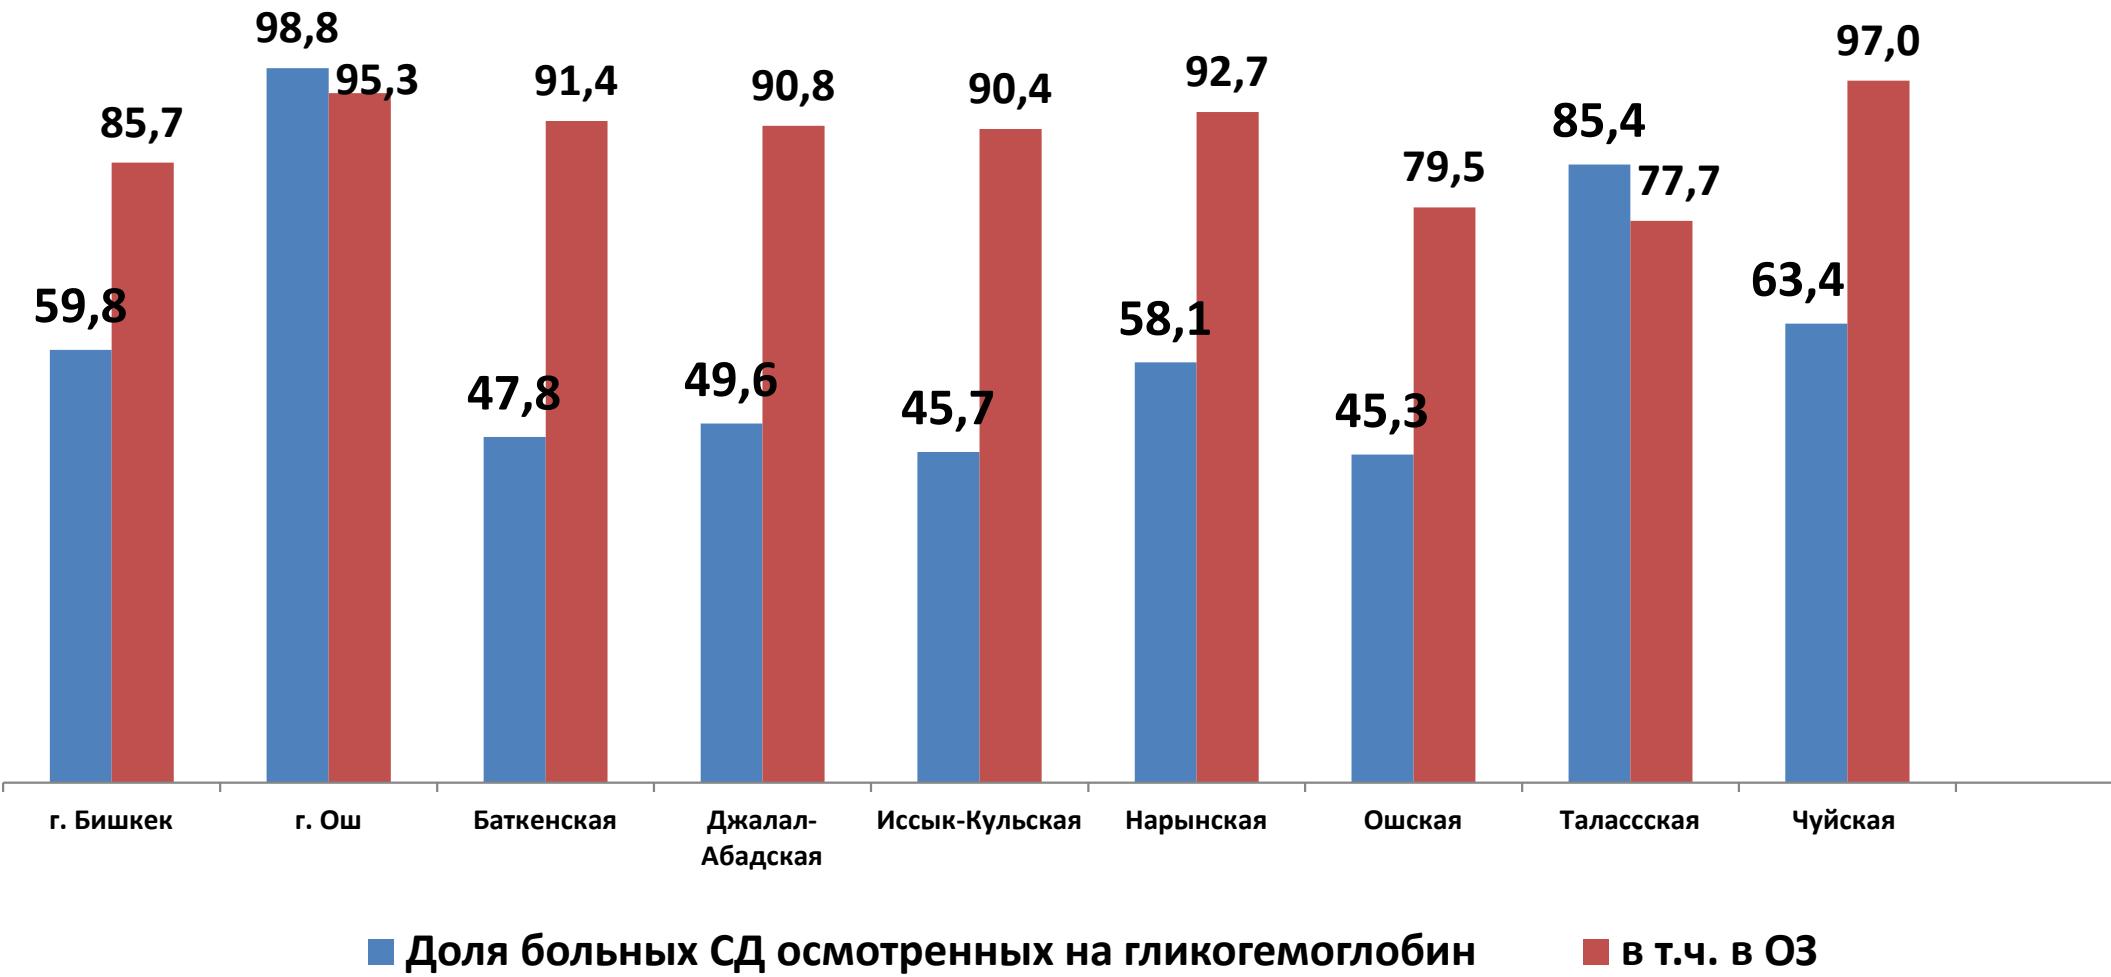

Number of new diabetes cases, 2022 -2023 (per 100000 population)

Mortality from diabetes, KR (per 100 000 population)

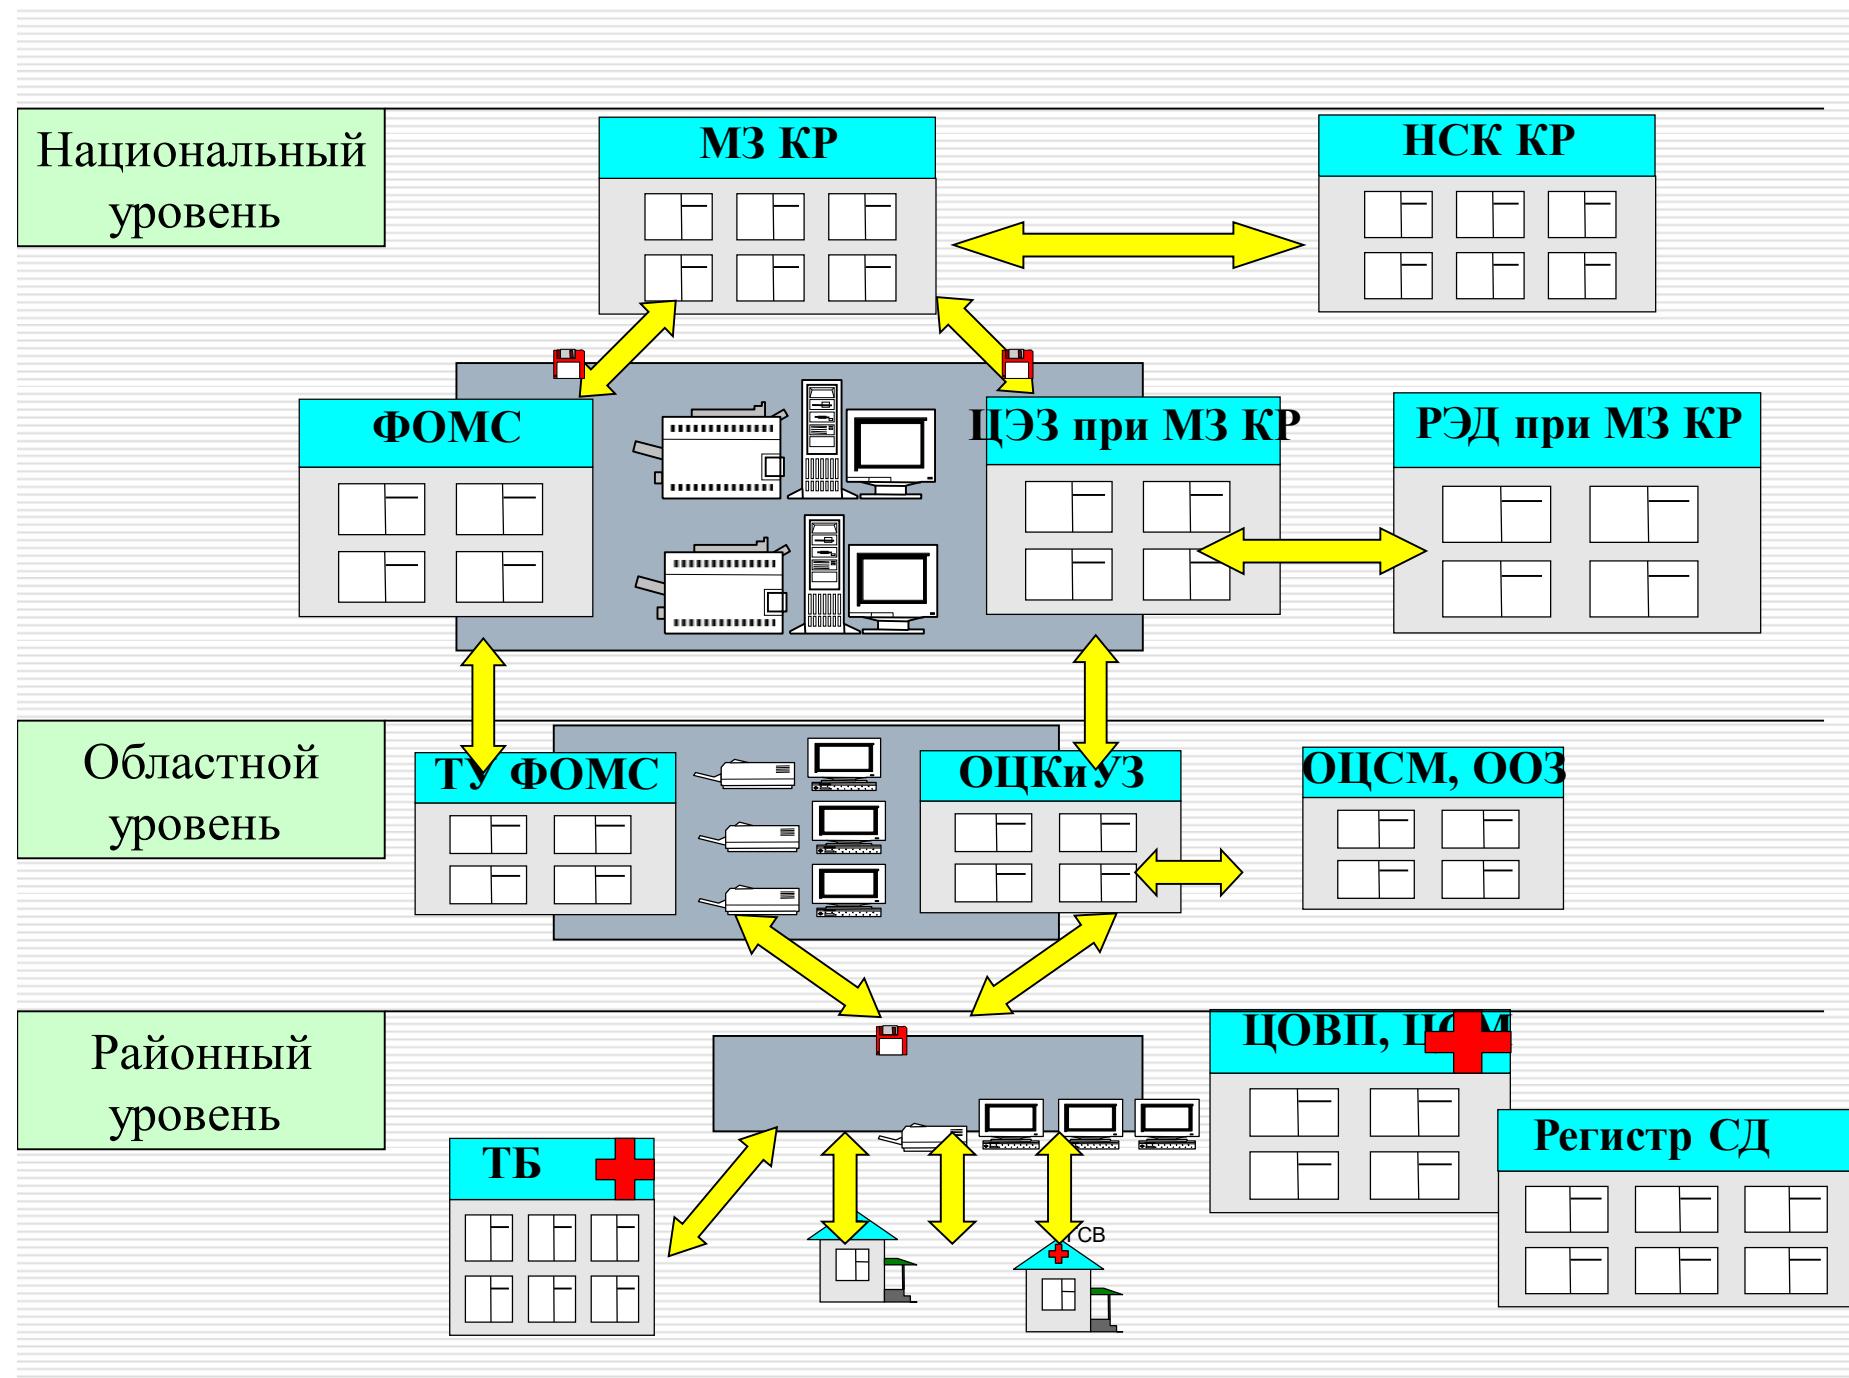

Quality indicators on diabetes: Proportion of patients with diabetes tested for glycohemoglobin (%), 2023

Quality indicators on HTN, 2023

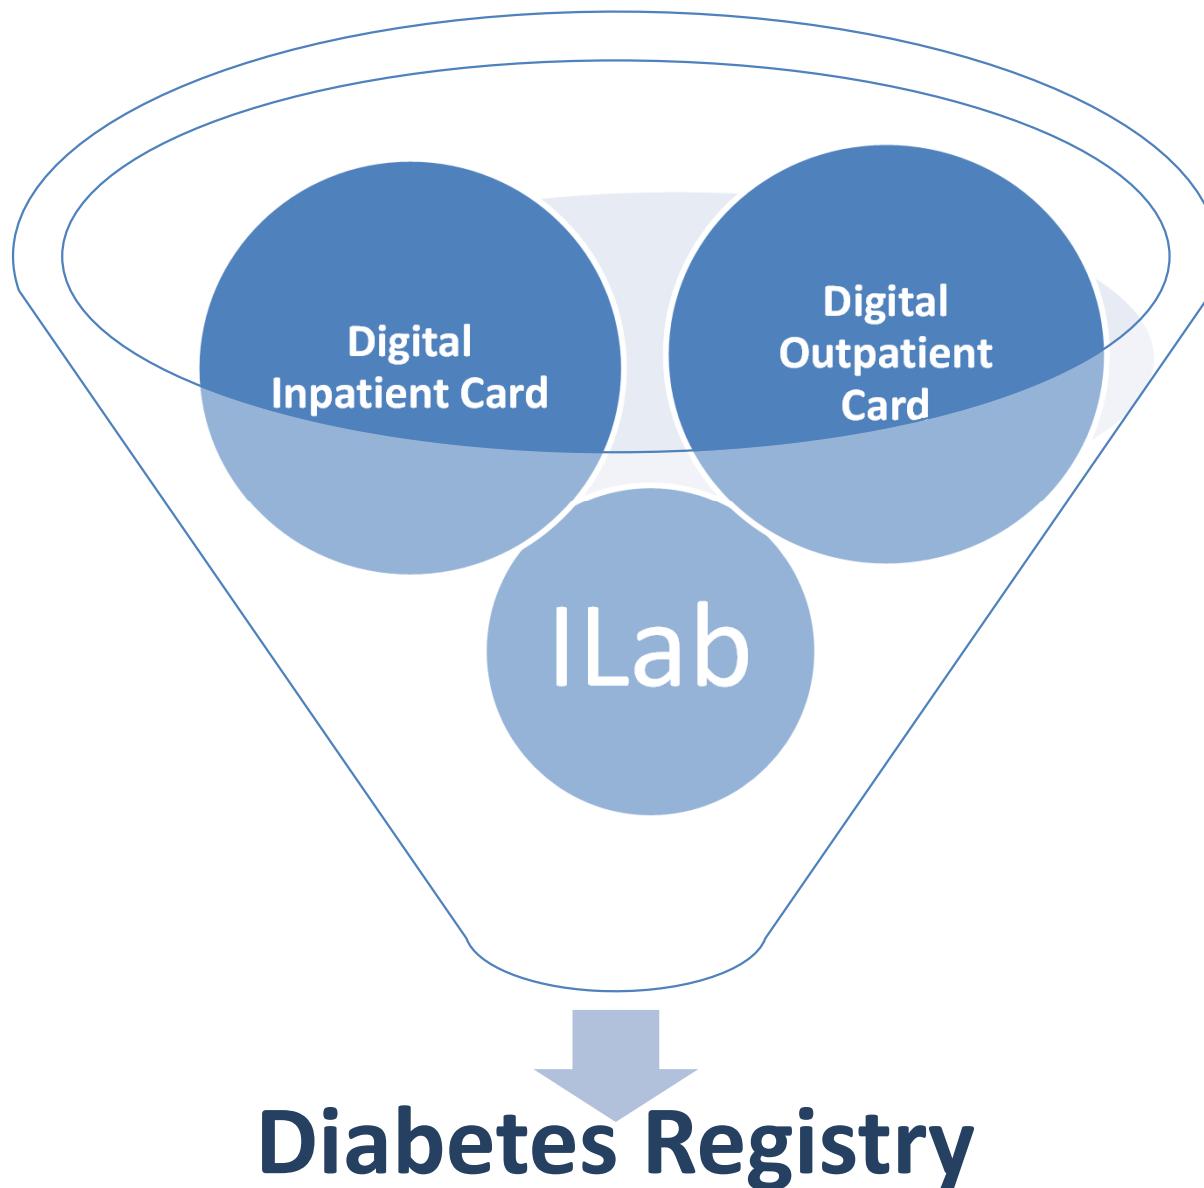

Information flows of statistical information on diabetes in online AIS "Medstat"

"Diabetes Registry" Module

- The methodology to develop various registries to monitor target population groups developed.
- "Sanarip Clinic" - is a multidisciplinary data entry system that enables to describe the health status of patients.
- The diabetes registry, as a module of the information system, will minimize data duplication during registration and subsequent monitoring of patients with diabetes.

How does this work?

Information systems implemented in health sector

- National Information System of Resource Management
- Electronic outpatient card
- Electronic inpatient record
- Digital health passport
- Referral to ITU
- Disability certificate
- Medical certificate
- DB “Enrolled population”
- AIS for laboratory services and vaccination
- AIS "Medstat" and oth.

Challenges and barriers to the development of health statistics

- HR
- Training
- Technical maintenance (computers, Internet, etc.)
- Organizational problems with the implementation of information systems (automation)

Next Steps

- Continue the implementation of automated information systems
- Step-by-step elimination of manual filling out forms
- Further work to improve the IS and interdepartmental cooperation and to monitor and analyze indicators on health and health service quality
- Creation and development of online electronic registers:
 - Diabetes
 - Hypertension
 - Hepatitis B and C
 - Other

THANK YOU FOR YOUR ATTENTION
